Six Monthly compliance report
Of
M/S JUD Cements Ltd.

Sl. No.	Condition proposed in Environmental Clearance	Compliance Status
1	It is, interalia, noted that the project involves cement plant & 10 MW captive power plant on a plot of area of 20.00 acres. The total water requirement is 500 – 532 KLD. The capacity of STP to be installed is 160 KLPD. The power requirement is 6 MVA. Total cost of the project is 88.08 Crores towards the cement plant and 40.35 Crores towards the captive power plant totaling an aggregate of 128.43 Crores.	900 TPD Cement Plant had been commissioned in 2008. Installation of the CPP (10 MW) had been deferred and no work had been started so far in this regard.
2	The State Expert Appraisal Committee after due considerations of the relevant documents submitted by the project proponent and additional clarifications furnished in response to its observations have recommended for environmental clearance as per the provisions of Environmental Impact Assessment Notification – 2006 and its subsequent amendments, subject to strict compliance of the terms and conditions as follows:-	Noted.
A. Specific Conditions		
i)	A stack of 120 m height shall be provided with continuous on-line monitoring system in respect of thermal power plant. The data collected shall be analyzed and submitted regularly to the Meghalaya State Pollution Control Board and SEIAA.	It may kindly be noted that the installation of the CPP (10 MW) had been deferred and no work had been started so far in this regard.
ii)	High efficiency Electrostatic Precipitator (ESPs) shall be installed to limit particulate emission to 50 mg/Nm3.	We shall include ESP in the Power plant, whenever shall be commissioned. Presently, due to various constraints, we could not start work for the installation of the power plant. In our cement plant, one High Efficiency Electrostatic Precipitator (ESP) with three fields had been installed in the kiln (Grate cooler outlet) to control the particulate emission below 50 mg/Nm^3. Present emission level is within the prescribed norms of 50 mg//Nm^3.
